- EPMS now manages the pre-school chain, all over the country
- Provides real-time access to all the business transactions
- EPMS serves as a source of information to other critical systems like the Accounting System and Student-Parent Portal

Executive Summary

Eurokids International is a leading company with its nationwide dominance in Pre-School chain. With over 350+ Business Partners across the country & still growing, it is the first of its kind Pre-School in India with international standards that aspires to inculcate quality education to kids.

EPMS (EuroKids Pre-School Management System) is the sole system used by Eurokids to manage its nationwide Pre-School business with real time capability to reach its business partners and transactions.

The Business Problem

Eurokids provides different Business Models, due to the varied cultural and economical differences throughout the country. These Models are extremely complex and dynamic in nature. The business operations include enquiries, admission, invoicing and monetary documents which are maintained manually by Business Partners and later on synchronized with the HO.

Key Challenges

- To simplify the complex business model configuration
- Handling mid-term and/or yearly collection pattern changes
- Speed up the business conduct
- Centralization of business transactions
- Reduce student under reporting
- Create a central repository of student and parent information

Solution

The Software Development & Consultancy division at Celusion Technologies conducted a detailed interview of the management, studied the existing business processes, and produced a feature list and software architecture that met the requirements.

The solution involved creating a web based application, which is easy to deploy and maintain. An easy to use solution for each business partner to maintain the business transactions at a central location without any delay.

The primary objectives met were:

- Centralized control over business operations
- Configuration of dynamic business models
- Real time business data and reports
- Creation of a student database for other service offerings by EuroKids
